

## 195. Tenth Line

Easy

Topics

Companies

Given a text file `file.txt`, print just the 10th line of the file.

### Example:

Assume that `file.txt` has the following content:

```
Line 1
Line 2
Line 3
Line 4
Line 5
Line 6
Line 7
Line 8
Line 9
Line 10
```

Your script should output the tenth line, which is:

```
Line 10
```

### Note:

1. If the file contains less than 10 lines, what should you output?
2. There's at least three different solutions. Try to explore all possibilities.

## Bash:

```
# Read from the file file.txt and output the tenth line to stdout.
sed -n '10p' file.txt
```

## Alternative Solutions:

```
# Read from the file file.txt and output the tenth line to stdout.
awk 'NR==10 {print}' file.txt
```
